

Philips CPAP & BiPAP Recall

The Philips CPAP lawsuits claim the use of various Philips CPAP machines can cause lung injuries and even cancer.

On June 14, 2021, Philips announced a voluntary recall for various Philips Bi-Level Positive Airway Pressure (Bi-Level PAP), Continuous Positive Airway Pressure (CPAP) & mechanical ventilator devices.

July 22, 2021, the FDA issued an official Class 1 recall of numerous Philips CPAP Machines. As noted by the FDA, a class 1 recall is "the most serious type of recall. Use of these devices may cause serious injuries or death."

In October 2021 an MDL was established for the Philips CPAP recall in federal court in Pennsylvania.
